A special apparatus for examination of the viscosity of liquids or molten solids at elevated pressures and temperatures is described. With the aid of this apparatus, automobile oils, cylinder oil, aviation oil, machine oil, a residual oil, rosin and two sugar solutions in glycerin were tested. The viscosity of the lubricating oils was found to greatly increase with rise of the

A PIEZO-ELECTRIC MEASUREMENT DEVICE FOR

An acceleration - and pressure-measuring device is
described which operates according to the piezo-
electric principle. An experimental investigation is
carried out of the resonant frequency and degree of
damping of the oscillating system. Proof is furnished
that the apparatus may be adjusted to a degree of
damping which is optimal for the recording of oscilla-
tion. (Author)
